

I claim:

1. A dispensing applicator for applying liquid to the skin, comprising:
 - (a) a handle having an internal reservoir for containing a liquid;
 - 5 (b) a head having an applicator portion; and
 - (c) a liquid delivery mechanism interconnecting the reservoir of the handle to the applicator portion of the head and operative responsive to pivotal movement of the handle to deliver liquid from the reservoir to the applicator portion when the applicator portion is positioned against a user's skin.
- 10 2. The applicator of Claim 1 wherein:
 - (a) the handle includes a base portion and the head includes a housing;
 - (a) the handle terminates at the base portion; and
 - (b) wherein the base portion is pivotally connected to the housing, whereby when
 - 15 the head is against the user's skin, the handle can be pivotally operated to dispense the liquid.
3. The applicator of Claim 1 wherein the reservoir of the handle is in liquid communication with the base portion of the head.
- 20 4. The applicator of Claim 2 wherein the head further comprises a locking mechanism, the locking mechanism to prevent pivotal movement of the base portion with respect to the applicator portion.
- 25 5. The applicator of Claim 2 wherein the applicator portion is pivotally biased away from the base portion by the liquid delivery mechanism.
6. The applicator of Claim 5 wherein the liquid delivery mechanism is a pump.
- 30 7. The applicator of Claim 6 wherein the pump is a reciprocating piston pump.
